**WE ARE
RENOVATING
THE FUTURE**
WITH OUR
EXPERIENCE
AND VISION

met

WHEN AND HOW WE STARTED?

We started our operation in 2001. With the strength of our organization's hectic overseas experiences, we have begun to develop our organization in difficult geographies of the Russian Federation, in the remote parts of Siberia, in harsh and unusual climate conditions. In our initial years, the area of activity, which began to expand in Romania and Uzbekistan, has reached 17 countries in total, with the participation of countries such as Turkmenistan, Papua New Guinea, Democratic Republic of Congo and our latest branch in Hungary, we also added qualified jobs in Turkey to our overseas jobs, which had a premium quality nature, in a short time. As of today, we completed over 5.5 million m² jobs in total.

FLEXIBILITY AND ADAPTABILITY

We believe that the international experience of doing business in different countries, all of which are different cultures, with their own rules and regulations, climate conditions, is invaluable. We see the logistical skill and planning capability required to be able to do business successfully in such remote locations as one of the most powerful features of our company culture.

ELECTROMECHANICAL COMMITMENT

We are proud to be the first of Turkey in this area. We believe that we can bring together the benefits of coordinating, facilitating project management and the convenience of two different main business displexes under the same roof to the companies we have worked with since our first day.

EMPLOYEE AFFILIATION

While making all this progress, we took care to connect with our employees with a high sense of belonging. We managed to convey our company philosophy and our way of doing business to our young and dynamic friends who joined our staff while we were growing. We have provided a stable working environment within the company, as well as the long-term relationships we have established with our business partners.

**BUSINESS
PARTNERSHIP**

Throughout our long journey over 20 years, we have gone beyond establishing an "Employer - Subcontractor" relationship with the companies we work with and aimed to have the role of a "solution partner" in their sight. We work by considering the interests and goals of our business partners at least as much as our own. This is our company philosophy. The mutual trust at the end of this approach has brought long-term relationships and since we were established, we have partners in the solution that we have been constantly serving. We consider that we are a solution partner not only for our employers, but also for project management firms and all our suppliers. As a natural result of this, we believe that we have a well-deserved name in the industry.

QUALITY POLICY

MET Engineering, which serves its customers in terms of mechanical and electrical commitment, has assessed the knowledge and experience gained from its organization to date in prestigious and international projects, making it a vision of growth and becoming a reliable brand in its industry. In order to achieve this vision:

- Conduct projects in a common geography and very different characteristics with common monitoring systems and a sense of quality,
- To set up management systems to make processes instantaneous traceable,
- To be able to preserve and maintain a reliable and priority "partner" position among the companies he works with,
- In the stroke of being happy while working and winning, to be able to provide long-term partnerships with their employees, we adopt as our basic principles.

MET Engineering, which serves its customers in terms of mechanical and electrical commitment, has assessed the knowledge and experience gained from its organization to date, in prestigious and international projects, making it a vision of growth and becoming a reliable brand in its industry.
